

Programming Fundamentals Assignment

Overview

This repository contains my Programming Fundamentals Assignment developed in C++. The project consists of 20 programming tasks that demonstrate the understanding of fundamental programming concepts and logical problem solving.

Project Objectives

The main objective is to build a strong foundation in C++ programming by implementing decision-making statements, loops, operators, variables, user input/output, and mathematical calculations.

Features

- 20 beginner-friendly C++ programs.
- Simple and readable code.
- Covers real-world programming scenarios.
- Easy to compile and execute.

Topics Covered

Input/Output, Variables, Data Types, Arithmetic Operators, Relational Operators, Logical Operators, If-Else Statements, Nested Conditions, Loops, Menu-Driven Programs, Mathematical Calculations, ASCII values, Billing Systems, and Time Conversion.

Software Requirements

Programming Language: C++

Compiler: GCC

IDE: Code::Blocks, Dev-C++, Visual Studio Code or any C++ supported IDE.

How to Run

1. Clone or download this repository.
2. Open the source code in your IDE.
3. Compile the program.
4. Run the executable.
5. Enter the required input to view the output.

Learning Outcomes

This assignment improved my understanding of programming logic, C++ syntax, conditional statements, loops, problem-solving techniques, and writing efficient beginner-level programs.

Future Improvements

The project can be enhanced by adding functions, arrays, file handling, and object-oriented programming concepts in future assignments.
